

Detection Announces Record 3rd Quarter Growth and Expansion into South American Gas Market

OCTOBER 11, 2004

Lynchburg, Virginia and Calgary, Alberta

Detection Technologies announced today that it has achieved unprecedented client growth during the 3rd quarter of 2004. Nine natural gas producers and gatherers representing over 350 compressors and 300,000 horsepower have been added to “Enalysis”, Detection’s proprietary compressor optimization and fleet management program. With these new additions, Detection’s client list has grown to over 55 companies, including eight of North America’s top ten independent natural gas producers.

Detection also announced today the expansion of its services into the South American natural gas market with the addition of six compressors located onboard an FPSO (Floating Production, Storage and Offshore Loading System) off the coast of Brazil.

“We are obviously thrilled with the growth we have been seeing, and will continue to aggressively reach out to other gas producers to help them optimize and manage their compressor fleets as well” said Cavan Carlton, Detection’s U.S. General Manager. “The Enalysis Program represents a quantum leap forward in the technology that natural gas producers have available for bringing more money to the bottom line using their compression assets. As any of our current clients will attest, Detection is extremely focused on giving our clients the tools and support they need to maximize gas production and profit.”
