

Tank Level Management:

Where Precise Monitoring Ensures Efficient Operations

In the oilfield, where every minute counts, properly managing chemical, water, and production tanks is critical to preventing costly overruns, avoiding downtime, and keeping the field operations efficient. Relying on manual readings, paper logs, spreadsheets and siloed systems leads to delays, safety risks, and operational inefficiencies.

EZ Ops Fieldlink enables a seamless, automated solution for real-time tank level management, ensuring operators and logistics teams stay ahead of potential issues and optimize every delivery. **Using Tank Level Sensors (TLS)**, you get real-time data on fluid levels, consumption rates, and refill needs on your mobile device.

Real-Time Monitoring:

EZOps integrates with TLS to capture continuous, accurate tank level data – eliminating the need for individuals to walk to the tank for manual checks and eliminating human reading and data entry errors.

Automated Alerts & Notifications:

Get proactive alerts when tanks are nearing empty or full, enabling just-in-time deliveries or pickups and preventing overflows or shortages.

Seamless Field-to-Office Visibility:

With a mobile-first platform, operators log and review tank data directly from the field, online or offline, while office teams access live dashboards to coordinate resources and manage compliance.

Data-Driven Decisions:

Use historical and live tank data to spot trends, improve chemical management strategies, and drive continuous operational improvement.

35%

Reduction in Downtime Related to Tank Levels

With real-time level readings and monitoring, costly downtime is reduced as levels out of range are immediately noted and addressed.

24%

Reduction on Delivery Spend

Optimizing deliveries based on all tanks reduces the overall number and cost of deliveries.

28%

Decrease in Emergency Dispatches

With proactive monitoring, last minute, costly truck rollouts are minimized, improving safety and reducing rush charges.

Ready to transform your Tank Level Management and lower OpEx and downtime?

Schedule a demo today with our team to see how EZOps and TLS technology can eliminate tank management headaches and improve profitability.
